

EDUCATION

Department of Economics, University of California, Davis <i>Ph.D. in Economics (Fifth Year)</i>	Davis, CA, USA 2021 - Present
• Advisor: Professors James Cloyne, Òscar Jordà • Research Area: Household Finance, Monetary Policy, Real Estate	
Department of Economics, Yonsei University <i>B.A. in Economics</i>	Seoul, South Korea 2005 - 2013
Department of Economics, University of California, Berkeley <i>Undergraduate Exchange Program</i>	Berkeley, CA, USA 2010

EMPLOYMENT

Bank of Korea Economist	2014 - 2021
• Authored a series of policy papers on trade and labor, published in the <i>BOK Monthly Bulletin</i> and <i>Economic Outlook</i> • Conducted monthly trade analyses for the <i>Monetary Policy Report</i> and contributed to classified reports submitted to Korea's Presidential Office. • Ranked in the top tier (0–10%) in cumulative performance evaluations among more than 620 peers in equivalent positions. Winner of the <i>Annual Thesis Competition</i>.	
The Export-Import Bank of Korea Investment Officer	2013 – 2013
Republic of Korea Air Force Sergeant	2007 – 2009

WORKING PAPERS

1. **Refinancing Inequality and Monetary Transmission Channel.** 2026.
Abstract: This paper documents substantial mortgage refinancing heterogeneity across income groups and quantifies its implications for the transmission of monetary policy. I show that refinancing inequality appears in both the intensity and timing of refinancing: the bottom income quintile refinances at roughly two-thirds the rate of the top quintile and faces markedly longer delays, even when refinancing is financially beneficial. These gaps persist even after controlling for income- and time-varying measures of lender credit tightness. The associated unrealized savings are large, exceeding 7.6% of monthly income for the bottom quintile. I develop a structural mortgage refinancing model that decomposes refinancing frictions into two distinct channels—inattention and hassle cost—and allows both frictions to vary by income group. The model matches the observed refinancing inequality, unlike homogeneous-friction benchmarks. Counterfactual experiments show that reducing inattention frictions for low-income households would amplify the effects of a policy rate cut by 13.7% in consumption over five years and improve wealth inequality.

WORK IN PROGRESS

1. **Demographics and Housing Cycle** (with Yoonku Jo, Hyunseo Park, Jaeyoung Yoo). 2026.
2. **The Effect of Mortgage Burdens on Households Consumption Response.** 2024.
